

Standard n° 4/014

WDF English Bulldog

ORIGIN: Great Britain

UTILITY: Dissuasion and Companion Dog.

CLASSIFICATION: Group 4 Dog Bull Type.

BRIEF HISTORICAL SUMMARY: The Bulldog was first classified as such in the 1630s though there is earlier mention of similar types referred to as bandogs, a term reserved today for a type of fighting dog. Used originally for bullbaiting, the Bulldog also fought its way through the dog pits but after 1835 began to evolve into the shorter faced, squatter version we now know. It entered the show ring in 1860 and the ensuing years saw a big personality change. A delightfully ugly dog with a pugilistic expression, which belies a loving, affectionate nature to family and friends. One of the oldest indigenous breeds, known as the national dog of Great Britain, and associated throughout the world with British determination and the legendary John Bull

GENERAL APPEARANCE: Smooth-coated, fairly thick set, rather low in stature, broad, powerful and compact. Head fairly large in proportion to size, but no point so much in excess of others as to destroy the general symmetry, or make the dog appear deformed, or interfere with its powers of motion. Face relatively short, muzzle broad, blunt, and inclined slightly upwards, although not excessively so. Dogs showing respiratory distress highly undesirable. Body fairly short, well knit, limbs stout, well muscled and in hard condition with no tendency towards obesity. Hindquarters high and strong. Bitches not so grand or well-developed as dogs.

BEHAVIOUR/TEMPERAMENT: Conveys impression of determination, strength, and activity. Alert, bold, loyal, dependable, courageous, fierce in appearance, but possessed of affectionate

HEAD: Viewed from side, head appears very high and moderately short from back to point of nose. Forehead flat with skin on and about head, slightly loose and finely wrinkled without excess, neither prominent nor overhanging face. Face from front of cheek bone to nose, relatively short, skin may be slightly wrinkled. Distance from inner corner of eye (or from centre of stop between eyes) to extreme tip of nose should not be less than the distance from tip of the nose to edge of the underlip. CRANIAL REGION: Skull: Skull relatively large in circumference. Viewed from front appears high from corner of lower jaw to apex of skull; also broad and square. From stop, a furrow, extending to middle of skull being traceable to apex. Stop: Defined. FACIAL REGION: Viewed from front, the various properties of the face must be equally balanced on either side of an imaginary line down centre. Nose: Nose and nostrils large, broad and black, under no circumstances liver colour, red or brown. Nostrils large wide and open, with well-defined vertical straight line between. Muzzle: Muzzle short, broad, turned upwards and deep from corner of eye to corner of mouth. Over nose wrinkle, if present, whole, or broken, must never adversely affect or obscure eyes or nose. Pinched nostrils and heavy over nose wrinkle are unacceptable and should be heavily penalised. Lips: Flews (chops) thick, broad and deep, covering lower jaws at sides, but joining underlip in front. Teeth not visible. Jaws / Teeth: Jaws broad, strong, and square, lower jaw slightly projecting in front of upper, with moderate turn up. Jaws broad and square with six small front teeth between canines in an even row. Canines wide

apart. Teeth large and strong not seen when mouth closed. When viewed from front under jaw directly under upper jaw and parallel. Cheeks: Cheeks well rounded and extended sideways beyond eyes.

EYES: Seen from front, situated low down in skull, well away from ears. Eyes and stop in same straight line, at right angles to furrow. Wide apart, but outer corners within the outline of cheeks. Round, of moderate size, neither sunken nor prominent, in colour very darkalmost black- showing no white when looking directly forward. Free from obvious eye problems

EARS: Set high - i.e. front edge of each ear (as viewed from front) joins outline of skull at top corner of such outline, so as to place them as wide apart, as high and as far from eyes as possible. Small and thin. "Rose ear" correct, i.e. folding inwards back, upper or front inner edge curving outwards and backwards, showing part of inside of burr

NECK: Moderate in length, thick, deep and strong. Well-arched at back, with some loose, thick and wrinkled skin about throat, forming slight dewlap on each side

BODY: Topline: Slight fall to back close behind shoulders (lowest part) whence spine should rise to loins (top higher than top of shoulder), curving again more suddenly to tail, forming slight arch - a distinctive characteristic of breed. Back: Short, strong, broad at shoulders. Chest: Wide, prominent, and deep. Body well-ribbed up behind. Brisket, round and deep. Well let down between forelegs. Ribs not flat-sided, but well-rounded. Underline and belly: Belly tucked up and not pendulous

TAIL: Set on low, jutting out rather straight and then turning downwards. Round, smooth and devoid of fringe or coarse hair. Moderate in length - rather short than long - thick at root, tapering quickly to a fine point. Downward carriage (not having a decided upward curve at end) and never carried above back. Lack of tail, inverted or extremely tight tails are undesirable.

LIMBS FOREQUARTERS: General appearance: Forelegs short in proportion to hindlegs, but not so short as to make back appear long or detract from dog's activity. Shoulder: Broad, sloping, and deep, very powerful and muscular giving appearance of being "tacked on" body. Elbow: Elbows low and standing well away from ribs. Forearm: Forelegs very stout and strong, well-developed, set wide apart, thick, muscular, and straight, bones of legs large and straight, not bandy nor curved. Metacarpus (Pastern): Short, straight, and strong. Forefeet: Straight and turning very slightly outward; of medium size and moderately round. Toes compact and thick, well split up, making knuckles prominent and high. HINDQUARTERS: General appearance: Legs large and muscular, slightly longer in proportion than forelegs. Legs long and muscular from loins to hock. Stifle (Knee): Stifles turned very slightly outwards away from body. Metatarsus (Rear pastern): Hocks slightly bent, well let down. Hind feet: Round and compact. Toes compact and thick, well split up, making knuckles prominent and high.

GAIT: Appearing to walk with short, quick steps on tips of toes, hind feet not lifted high, appearing to skim ground, running with one or other shoulder rather advanced. Soundness of movement of the utmost importance.

COAT: Coat: fine texture, short, dense and smooth (hard only because short and dense, not wiry). Color: Whole or dark (i.e. whole with black mask or muzzle). Whole colors (which should be bright and pure of their kind). i.e. brindle, red with their various shades, fawn, fallow etc., white and piebald (i.e. combination of white with any of the previous colours). Dudley, black and black with tan, all tan colors such as Blue, Black, Lilac, Chocolate and others are allowed. All Merle colors are accepted as long as it is respected not to breed in double merle.

SIZE: Males: 25 kgs. Females: 23 kgs.

FAULTS: Any departure from the foregoing points should be considered a fault and the seriousness with which the fault should be regarded should be in exact proportion to its degree and its effect upon the health and welfare of the dog

DISQUALIFYING FAULTS: • Aggressive or overly shy. • Any dog clearly showing physical or behavioural abnormalities.

N.B: • Male animals should have two apparently normal testicles fully descended into the scrotum. • Only functionally and clinically healthy dogs, with breed typical conformation should be used for breeding.

The latest amendments are in bold characters.
